

## **Θέση Web Developer**

### **Job Description**

At iTrack, we rely on our dynamic team of engineers to solve the many challenges and puzzles that come with our rapidly evolving technical stack. We're seeking a full stack engineer who is ready to work with new technologies and architectures in a forward-thinking organization that's always pushing boundaries. Here, you will take complete, end-to-end ownership of projects across the entire stack. Our ideal candidate has experience building products across the stack and a firm understanding of web frameworks, APIs, databases, and multiple back end languages.

### **Objectives of this Role**

- Work across the full stack, building highly scalable distributed solutions that enable positive user experiences and measurable business growth
- Develop new features and infrastructure development in support of rapidly emerging business and project requirements
- Assume leadership of new projects from conceptualization to deployment
- Work with agile development methodologies, adhering to best practices and pursuing continued learning opportunities

### **Daily and Monthly Responsibilities**

- Participate in all aspects of agile software development including design, implementation, and deployment
- Architect and provide guidance on building end-to-end systems optimized for speed and scale
- Work primarily in HTML/CSS, PHP, JavaScript, jQuery, MySQL and Git

### **Required Skills and Qualifications**

- Bachelor's degree in computer science, information technology, or engineering
- 1+ years of experience building large-scale software applications
- Experience building web applications
- Experience designing and integrating RESTful APIs
- Knowledge of HTML/CSS, PHP, JavaScript, jQuery, MySQL and Git
- Unit/integration testing experience
